

# Thames Hospice Windsor

**Client:** Thames Hospice

**Architect:** Allen Associates

**Engineer:** AKS Ward

**Duration:** 24 weeks

**Value:** £600k

## Case Study

### New sanctuary building and gardens.

The project was a new building that is now used as 'sanctuary' for families and patients of the hospice. This light and airy room with ancillary space and link building leads out into decorative gardens with access to all areas. The sanctuary room has a state of the art media system and controls to adjust the lights and speaker system at the touch of a button.

Special care was taken to ensure that no disruption occurred to the hospice, which remained open, during very sensitive times.

The phased requirements of this project needed careful sequencing to enable completion of the car park works and soakaways prior to the building commencing.

A mix of Cedar cladding, glass and high-tech Zinc rain screen cladding was used to complete the envelope of this contemporary building.

The gardens consist of two water features, paddle stone walls and various statues all of which were built or installed by our specialist internal trades.

The project was finished 2 weeks early to a delighted client.
